

Outreach engine · prepared by Aureon

COLD OUTREACH ENGINE & PIPELINE PROJECTION

Your outreach machine, and what it is projected to produce.

Lukas, this is the engine we are running for LK Advertising into the US realtor market: how it works, the live deliverability and engagement numbers from our stack, and a grounded pipeline + revenue projection built on those real rates.

For Lukas Köhler, CEO · LK Advertising

Prepared by Aureon Global · 2026

A fully managed cold-outreach system, end to end.

1

Sourcing

We auto-discover US real-estate brokerage team pages and extract named agents with verified, deliverable email addresses. The list rebuilds itself daily.

2

Verification

Every address is syntax, MX, SMTP and catch-all checked before it is allowed into a campaign. Only verified contacts get emailed, which is why bounce stays low.

3

Sending + warm-up

12 dedicated sending subdomains, each warmed and capped to protect reputation, for a combined throughput of up to 600 cold emails a day. A 7-step sequence per prospect.

4

Reply handling

Positive replies are routed straight to your cal.com booking link. Auto-replies and unsubscribes are classified and suppressed automatically.

The infrastructure is healthy and lands in the inbox.

98.4%

Delivery rate

Of all sent.
Verification
keeps this high.

51%

Open rate

Of delivered.
Strong for cold
B2B.

1.5%

Bounce rate

Well under the
3% reputation
danger line.

0.5%

Reply rate

Of delivered,
current
baseline. The
lever we scale
next.

Source: our own send_log over the trailing 30 days (~2,385 production sends across the stack). These are real, measured rates, not estimates. Delivery and open rate confirm the inbox placement is working; reply rate is the early baseline we improve with copy, targeting and volume (see next slide).

What 600 sends a day turns into.

12 dedicated subdomains, 600 cold emails a day, across ~22 active sending days a month (~13,200 sends) once the warm-up ramp reaches full volume on day 22.

Built on the current 0.5% reply baseline over a 22-day sending month (a 22-day warm-up ramp brings the senders to full 600/day volume first; weeks 1-3 build up to it). At a 1% reply rate, realistic once copy and targeting are tuned, these figures roughly double to ~32-58 positive replies a month. Reply rate, not deliverability, is the growth lever from here.

Even a low-single-digit close count pays for itself.

PER MONTH, AT FULL RAMP (600/DAY × 22 DAYS)	CONSERVATIVE (0.5%)	TUNED (1%)
Positive replies / mo	16 – 29	32 – 58
Booked listing appointments delivered	10 – 22	19 – 44
Listings won (≈30% of appointments)	3 – 7	6 – 13
Avg. commission per closed listing	~\$9,000	~\$9,000
Est. commission value to the agent / mo	\$26k – \$59k	\$53k – \$118k

\$9k+

Per closed listing

Typical US side commission on a median-priced home.

Perf.

LK's billing

Performance based, tied to appointments delivered, not a flat retainer.

12 mo

Compounding

Volume + reply-rate gains stack month over month as senders mature.

Illustrative model. Appointment volume from our measured rates; close rate (~30%) and commission (~\$9k) are market-typical assumptions and vary by the agent's market, price band and their own close process. Shown to size the opportunity, not as a guarantee.

THE PLAN TO SCALE IT

Three levers, in priority order.

- **Lift reply rate from 0.5% toward 1%+** — sharper subject lines, market-specific first lines, and A/B on the 7-step sequence. This is the single biggest multiplier.
- **Grow verified volume** — the sourcing engine adds fresh brokerage seeds daily; more verified contacts means more booked calls at the same rates.
- **Move sending onto lk-advertising.site** — your own verified domain (DNS in progress) for full brand control and an independent sender reputation.

Deliverability is solved · Reply rate is the focus · Volume compounds

THE ACTUAL OUTREACH · WHAT GETS SENT

A 7-step sequence over 28 days, in your voice.

Each prospect receives up to seven touches, performance-media angle throughout, every positive reply routed to cal.com/lkadvertising/15min. Name-optional, so brokerage inboxes get a clean greeting too.

Day 0 · Offer + proof

Day 2 · Risk reversal

Day 4 · Data point

Day 7 · How it works

Day 11 · Yes / no

Day 18 · 60-day pilot

Day 28 · Breakup

The full copy follows. {greeting} is replaced per prospect with the agent's first name, or their brokerage name when no first name is available.

THE SEQUENCE · EMAILS 1-4

Lukas Köhler · LK Advertising → {greeting}

1 · 5 to 10 more listing appointments this quarter

Hi {greeting},

Quick one. We get real estate agents 5 to 10 more listing appointments a month with paid ads, and you only pay on performance.

We build and run the Meta and Google campaigns, handle the creative and targeting, and send you booked appointments with sellers in your market. Not a 3 to 8 thousand dollar retainer into the void. You pay on the results we deliver.

A team we ran went from 6 listing appointments a month to 19 in about 7 weeks, same market, same budget.

Worth 15 minutes to see if your market is open? cal.com/lkadvertising/15min

Lukas Köhler · LK Advertising → {greeting}

2 · would you take 5 booked seller calls

Hi {greeting},

Probably buried by now, so I will keep it short.

If we put 5 booked seller appointments on your calendar this month and you only paid on performance, would you take that call?

That is the whole offer. We run the ads, you get the appointments. Compare that to an agency charging you up front every month with no guarantee.

15 minutes: cal.com/lkadvertising/15min

Lukas Köhler · LK Advertising → {greeting}

3 · 6 to 19 appointments

Hi {greeting},

One data point.

An agent we ran ads for went from 6 listing appointments a month to 19 in roughly 7 weeks. Same market, same offer, just campaigns built to book appointments instead of collect clicks.

The same setup would map onto your market. Want me to show you how on a quick call?

Lukas Köhler · LK Advertising → {greeting}

4 · how the booked-appointment math works

Hi {greeting},

The reason this works is the funnel, not the ad spend.

Most agent ads send people to a generic valuation page and lose them. We run a seller-specific funnel that qualifies and books the appointment before it reaches you, so your time only goes to sellers who showed up to talk listings.

Before: clicks, form fills, no shows. After: booked appointments on your calendar.

Worth 15 minutes to map it onto your area?
cal.com/lkadvertising/15min

THE SEQUENCE · EMAILS 5-7

Lukas Köhler · LK Advertising → {greeting}

5 · {greeting}, yes or no

Hi {greeting},

Real question, takes 30 seconds.

If we ran the ads, booked the seller appointments, and you only paid on performance, is that a yes?

A clear yes or no both work.

Lukas Köhler · LK Advertising → {greeting}

6 · 60 day pilot, performance based

Hi {greeting},

The lowest risk version I can offer.

60 day pilot. You pick your market. We build and run the campaigns and deliver booked seller appointments. Performance based, so if it does not produce, you are not locked into a retainer.

We cap how many agents we take per market so the ads do not compete. Want the pilot scope for your area, or pass for now?

cal.com/lkadvertising/15min

Lukas Köhler · LK Advertising → {greeting}

7 · last one from me

Hi {greeting},

Wrapping up on my end.

If this is not the quarter, no hard feelings. If you ever want to revisit, a one word reply (later) is enough and I will check back.

If this was the wrong angle entirely, fair enough, and best of luck with your market this year.

Reply handling

Positive reply → your calendar

Any positive reply is routed straight to cal.com/lkadvertising/15min.

Auto-replies, out-of-office and unsubscribes are detected and suppressed automatically, so the list stays clean and your reputation stays protected.

You only ever see the agents worth talking to.

WHERE WE ARE

Engine built. Domain finishing. Ready to ramp.

The full system is live on our infrastructure and sending. Once lk-advertising.site DNS verifies we move onto your own domain and open the ramp. The numbers above are what that pipeline is projected to produce, grounded in rates we are already hitting.

[Review & green-light the ramp →](#)
