

Atlas X Ads — Creative, Copy & Conversion Plan

New ad creatives and copy for Atlas, the AI backtester, plus targeting, budget, and a conversion-optimization playbook for X Ads Manager. Prepared 2026-06-07.

THE PRODUCT (WHAT WE ARE SELLING)

Atlas is AlgoAlpha's AI-powered backtester and strategy-discovery tool. It scans the market with AI and surfaces strategies ranked by win rate, net profit, and risk ratio, with no coding and no manual chart grind. It is not sold standalone: it is bundled into the Indicators plan (\$24.97/mo), Signals (\$55.97/mo), and the VIP Bundle (\$68.97/mo). Brand line: **Signal first. Then trade.** 79,000+ traders.

THE 4 CREATIVES (ATTACHED AS PNGS IN THIS FOLDER)

FILE	SIZE / PLACEMENT	ANGLE
atlas-landscape-A_1200×628.png	1.91:1 — website card / single image	"Stop hunting for strategies. Let the AI find them." (pain → relief)
atlas-landscape-B_1200×628.png	1.91:1 — website card / single image	"Win rate, profit and risk" (proof / metrics-led)
atlas-square-A_1080×1080.png	1:1 — feed	"What if your backtesting ran itself?" (curiosity hook)
atlas-square-B_1080×1080.png	1:1 — feed	"Manual backtesting vs Atlas" (before/after contrast)

Use landscape for the Website Traffic / Website Conversions objective (clickable card). Use square for in-feed awareness and retargeting. Pair each image with a copy variant below and A/B at least 2 creatives per ad group.

X single-image ad: headline shows under the image (~70 chars), the post/primary text sits above (first ~120 chars matter most). No exclamation marks per AlgoAlpha brand. Each block = primary text / headline / CTA button.

Variant 1 — Pain → relief

Primary: You do not need more screen time. You need strategies that actually have an edge. Atlas runs the backtesting with AI and hands you the ones worth trading.

Headline: Stop hunting for strategies. Let the AI find them.

CTA button: **Start free trial** · pair with landscape-A

Variant 2 — Proof / metrics

Primary: Atlas scores strategies on win rate, net profit, and risk ratio, then ranks them for you. No code. Backtested across real market history.

Headline: Strategies optimized for win rate, profit and risk.

CTA button: **Learn more** · pair with landscape-B

Variant 3 — Curiosity hook

Primary: What if your backtesting ran itself while you slept. Atlas does the heavy lifting with AI, you just trade the setups that pass.

Headline: What if your backtesting ran itself?

CTA button: **Sign up** · pair with square-A

Variant 4 — Before / after

Primary: Manual backtesting: hours per strategy and easy to fool yourself. With Atlas: seconds, ranked by real metrics, no code. Join 79,000+ traders.

Headline: Manual backtesting vs Atlas. It is not close.

CTA button: **Get started** · pair with square-B

Variant 5 — Social proof / FOMO

Primary: 79,000+ traders use AlgoAlpha to find signals before they trade. Atlas is the AI that finds the strategy first, so you are not guessing.

Headline: Signal first. Then trade. Now with Atlas AI.

CTA button: **Start free trial** · pair with landscape-A or square-A

TARGETING & BUDGET (X ADS MANAGER SETUP)

Objective

- **Cold:** Website Conversions (optimize for the trial signup event), not "Traffic". Traffic buys clicks, conversions buy signups.
- **Warm:** a second Conversions campaign for retargeting.

Audiences

- Keywords: backtesting, trading strategy, TradingView, crypto signals, algo trading, price action, scalping, swing trading.
- Follower look-alikes: @TradingView and large crypto-trading / fintwit accounts.
- Interests: Investing, Cryptocurrencies, Day trading.
- Retargeting: site visitors (last 30 days), video viewers (50%+), and anyone who engaged with the ads.

Budget & bidding

- Start lean: 3 ad groups x 1 angle each, ~\$20–30/day per group for 5–7 days to gather data.
- Autobid first, then switch winners to target-cost once you know your cost-per-trial.
- Kill any ad group above ~2x your target cost-per-signup after 1,000+ impressions.

Structure

- 1 campaign (Conversions) → 3 ad groups (Pain, Proof, Curiosity) → 2 creatives each.
- Separate campaign for retargeting with the before/after + social-proof creatives.

CONVERSION PLAYBOOK — GETTING THE MOST SIGNUPS

- **Match the click to the page.** Send each ad to a landing page that repeats the ad's exact promise (e.g. the "AI finds strategies" headline). Mismatched landing pages are the #1 conversion killer.
- **Track the real event.** Install the X pixel and fire a conversion on trial-start, not on page-view. Optimize toward that event, not clicks.
- **Lead with the free trial.** "Start free trial" converts colder traffic than "Buy". Let the product sell the upgrade.
- **Show price honestly.** "From \$24.97/mo, cancel anytime" filters tire-kickers and raises signup quality.
- **Retarget hard.** Most signups come on the 2nd–4th touch. Budget 25–35% to retargeting; that is usually the cheapest cost-per-signup.
- **Refresh creative every ~7–10 days.** X audiences fatigue fast; rotate the 4 creatives and pause the worst CTR weekly.
- **Add a video later.** A 10–15s screen-capture of Atlas ranking strategies will likely beat any static. Worth testing once statics have a baseline.

What I could not do from here: I cannot log into your X Ads Manager, so I could not pull the **current** Atlas campaign numbers (spend, CTR, CPC, cost-per-signup, which ad groups convert). To analyze and tune the live campaign, paste these creatives + copy in, run for ~5–7 days, then send me a screenshot or CSV export of the campaign breakdown and I will tell you exactly what to scale, cut, and re-bid.
